

## **Problem Statement 08:**

Development of an online portal for BRSR reporting of Corporate ESG Reports.

**Deliverable :** ESG Reporting Software

### **Description**

The UN has declared a set of Strategic Development Goals for the world. ESG stands for Environmental, Social, and Governance, referring to a framework used to evaluate an organization's sustainability practices and ethical impact in the context of UN's SDGs. Securities and Exchange Board of India has developed guidelines for Indian corporate entities to report their ESG reports in a uniform format.

Megha Engineering and Infrastructures Limited is a large infra group with several subsidiaries and about 250 projects across India and abroad. The hackathon problem is to create web-based software to help the MEIL Group of Companies handle its ESG reporting in a comprehensive and detailed manner meeting the SEBI guidelines. The specs of the software need to be developed in accordance with the published SEBI guidelines. MEIL needs reporting at various levels of granularity starting from group, subsidiary entities and business units.

**Note :** Please refer to the supporting documents provided below for additional context and a comprehensive understanding of the Problem Statement.
